Bringing harmony to your space

# Innovative 'V' Drain Solution

Every beautiful space deserves a finish that works as flawlessly as it looks.

Yet too often, drainage is an afterthought—something hidden, tolerated, or compromised.

Our **RENOX 'V' Drain** was created to change that.

- Inspired by the natural way water wants to move, the **'V' shaped** fall draws water gently inward, guiding it with purpose rather than forcing it away
- With **colour-matched finishes** that align seamlessly with tapware, the drain becomes an extension of the design language—subtle, cohesive, and intentional. No visual disruption. No mismatched metals. Just harmony.
- **Different depth** options ensure flexibility across a wide range of applications, making installation smarter, cleaner, and more adaptable—no matter the project scale.

# About Us

**RENOX** is an Australian-designed and manufacturer of aluminium 'V' Drain and tile-insert floor waste, specialising in matching colours for both your drains and tapware.

Engineered for performance, durability, and seamless design, our design team have developed innovative anodised aluminium drains and sleek high-quality floor waste system that are suitable for all environments.

With a steadfast commitment to quality and innovation, we have established ourselves as a trusted name in the field of drainage solutions for modern infrastructure and architectural applications.

It's the details no one notices - until they do. Our RENOX drains are designed for those who know real luxury lives in the smallest details.

You've chosen every tile, every texture. Why let a clunky drain disrupt your masterpiece? Our versatile drainage solution completes the vision — because great design is about harmony.

At RENOX, we're proud to support tradespeople and homeowners across Australia with dependable drainage solutions that stand the test of time.

RENOX

# Construction and Finishes

## RENOX 'V' DRAIN

The material finish we use for our 'V' drain is **anodised aluminium**. Anodising is an electrolytic passivation process where it forms a durable, corrosion-resistant oxide layer on the surface, enhancing the metal's strength and longevity, especially in wet or chemically exposed environments.

The anodised finish not only improves resistance to wear and rust but also offers a clean, modern look that can be coloured or left with a sleek metallic finish.

## RENOX FLOOR WASTE

Our RENOX floor waste is crafted from high-quality solid brass, ensuring exceptional durability, strength, and long-lasting performance. Unlike plastic or plated alternatives, solid brass resists corrosion, rust, and wear even in wet or humid environments, making it ideal for bathrooms, showers, and outdoor areas.

The material's natural antibacterial properties and premium finish also provide a touch of elegance while maintaining hygiene. With its robust construction and refined look, our solid brass floor waste delivers both functional reliability and timeless style for any drainage application.
